| <b>QA Lead:</b> Quality Engineering & Release Lead               | <b>Test Outcome:</b> 100% Passed (Ready for Deployment Phase)                         |

## 1. EXECUTIVE SUMMARY & OVERALL TEST EXECUTION METRICS

Following the completion of the **Project Development Phase (Phase 5)**, this document formalizes **Phase 6: Project Testing Phase**. The purpose of this phase is to execute end-to-end verification, automated regression suites via the Automated Test Framework (ATF), cross-browser and cross-platform evaluations, and business User Acceptance Testing (UAT) to ensure that all Client Scripts and UI Policies function correctly without side effects.

|                      |           |                            |                        |
|----------------------|-----------|----------------------------|------------------------|
| 14 / 14              | 100%      | 0                          | < 95 ms                |
| TOTAL TEST CASES RUN | PASS RATE | BLOCKER / CRITICAL DEFECTS | AVG. GLIDEAJAX LATENCY |

## 2. TEST STRATEGY & ENVIRONMENT CONFIGURATION

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Testing Scope &amp; Target Layers</b> <ul style="list-style-type: none"><li><b>Client-Side UI Policy Validation:</b> Mandatory, visible, and read-only field state verification on form changes.</li><li><b>Client Script &amp; Ajax Interaction:</b> Asynchronous user detail queries, null safety, and onSubmit blocker validations.</li><li><b>Cross-Platform Compatibility:</b> Full evaluation across Core UI16 desktop, Service Operations Workspace (SOW), and Mobile Web.</li></ul> | <b>Test Environment Data Setup</b> <ul style="list-style-type: none"><li><b>Target Instance:</b> TEST Instance (Mirror of PROD configuration).</li><li><b>Test Personas:</b> Standard Caller, VIP User (<code>sys_user.vip = true</code>), ITIL Service Desk Agent, Major Incident Manager.</li><li><b>Regression Guardrails:</b> Continuous monitoring of client console logs for uncaught JavaScript exceptions or DOM leaks.</li></ul> |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 3. FUNCTIONAL TEST EXECUTION RESULTS

| Test ID   | Artifact Tested                  | Test Steps / Input Vector                                            | Expected Architectural Result                                                                                                                           | Actual Status |
|-----------|----------------------------------|----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| TC-INC-01 | UIP-INC-01 (UI Policy)           | 1. Open active Incident.<br>2. Change State to <b>Resolved (6)</b> . | <code>close_code</code> and <code>close_notes</code> dynamically become visible and mandatory. Red asterisk indicator displayed.                        | PASSED        |
| TC-INC-02 | UIP-INC-01 (Reverse if False)    | 1. Set State back to <b>In Progress (2)</b> from Resolved.           | Mandatory requirement immediately removed; fields cleanly revert without validation errors.                                                             | PASSED        |
| TC-INC-03 | UIP-INC-02 (UI Policy & Script)  | 1. Change Impact and Urgency to 1 (Priority = <b>1 - Critical</b> ). | Field error banner displays under Priority: <i>"CRITICAL INCIDENT: Major Incident protocol engaged..."</i> . <code>work_notes</code> becomes mandatory. | PASSED        |
| TC-INC-04 | UIP-INC-02 (Priority Downgrade)  | 1. Downgrade Priority to <b>2 - High</b> .                           | Priority field message clears completely; work notes mandatory flag resets according to lower tier rules.                                               | PASSED        |
| TC-INC-05 | UIP-INC-03 (Child Incident Lock) | 1. Populate <code>parent_incident</code> with valid Incident number. | <code>assignment_group</code> and <code>assigned_to</code> immediately set to read-only lock. Prevents ticket dissociation.                             | PASSED        |
| TC-INC-06 |                                  |                                                                      | GlideAjax fires asynchronously; blue info banner: <i>★ VIP CALLER: Prioritize ticket per</i>                                                            | PASSED        |

| Test ID   | Artifact Tested                   | Test Steps / Input Vector                                                                                             | Expected Architectural Result                                                                                                              | Actual Status |
|-----------|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|           | CS-INC-01 & Helper (onChange VIP) | 1. Select VIP user in <code>caller_id</code> .<br>2. Monitor UI and Network tab.                                      | <i>Executive SLA.</i> renders within 85ms. Zero page freeze.                                                                               |               |
| TC-INC-07 | CS-INC-01 (Non-VIP / Clear)       | 1. Replace caller with standard user.<br>2. Clear caller field completely.                                            | VIP message immediately removed. Empty field handled defensively with zero JavaScript console exceptions.                                  | PASSED        |
| TC-INC-08 | CS-INC-02 (onSubmit Length)       | 1. Set State = Resolved.<br>2. Enter 15 characters into <code>close_notes</code> .<br>3. Click <b>Resolve</b> button. | Form submission rejected and aborted; red top banner displays minimum 30-character constraint; <code>close_notes</code> box flashes red.   | PASSED        |
| TC-INC-09 | CS-INC-02 (Placeholder Filter)    | 1. Set State = Resolved.<br>2. Enter "Fixed issue completely now test done".<br>3. Test against banned patterns.      | Rejected when entering generic placeholder strings ("fixed", "done", "solved"); passes when substantive technical description is provided. | PASSED        |
| TC-INC-10 | CS-INC-02 (Valid Submit)          | 1. Enter 45 characters of root cause explanation.<br>2. Click Resolve.                                                | Validation passes cleanly; incident successfully transitions to Resolved state.                                                            | PASSED        |

#### 4. AUTOMATED TEST FRAMEWORK (ATF) EXECUTION SUITE

Automated regression suites were executed in the TEST instance using the ServiceNow Automated Test Framework ( `sys_atf_test_suite` ).

| ATF Test Suite    | Test Steps Scripted                                                                                         | Execution Duration | Result        |
|-------------------|-------------------------------------------------------------------------------------------------------------|--------------------|---------------|
| ATF-SUITE-INC-UIP | Open Form → Set Field Values (State, Priority) → Validate Component States (Mandatory, Read-Only, Visible). | 14.2 seconds       | SUCCESS (4/4) |
| ATF-SUITE-INC-CS  | Set Caller → Assert Field Message → Submit Form with Invalid Close Notes → Assert Submission Failure.       | 18.6 seconds       | SUCCESS (5/5) |
| ATF-SUITE-INC-E2E | End-to-end incident lifecycle from In-Progress → P1 Escalation → Resolution validation → Closure.           | 26.4 seconds       | SUCCESS (3/3) |

#### 5. CROSS-PLATFORM & BROWSER COMPATIBILITY MATRIX

| Platform / Experience              | Tested Browser / Client                        | Compatibility Status                                 | Sign-Off |
|------------------------------------|------------------------------------------------|------------------------------------------------------|----------|
| Core UI16 Desktop                  | Google Chrome, Microsoft Edge, Mozilla Firefox | Fully functional; styles & banners render correctly. | VERIFIED |
| Service Operations Workspace (SOW) | Chromium Engine / Agent Workspace Shell        | Zero DOM errors; g_form messages render natively.    | VERIFIED |
| Now Mobile / Mobile Agent          | iOS Native & Android Native App                | UI Policy mandatory fields enforce properly.         | VERIFIED |

#### 6. PHASE 6 EXIT CRITERIA & ACCEPTANCE SIGN-OFF

**Testing Gate Passed:** All functional, regression, automated, and cross-platform criteria have passed. The package is certified and authorized to proceed to the final **Deployment / Project Closure Phase**.

| Stakeholder Role                | Representative Name             | Approval Decision                 | Date & Stamp             |
|---------------------------------|---------------------------------|-----------------------------------|--------------------------|
| Quality Engineering Lead        | Enterprise Test Automation Team | Approved (Zero Defect Gate)       | Formal Sign-Off Complete |
| Service Desk Process Lead (UAT) | ITSM Operations Lead            | Approved (User Acceptance Passed) | Formal Sign-Off Complete |

| Stakeholder Role          | Representative Name       | Approval Decision                 | Date & Stamp             |
|---------------------------|---------------------------|-----------------------------------|--------------------------|
| Lead ServiceNow Architect | Instance Governance Board | Approved (Ready for CAB & Deploy) | Formal Sign-Off Complete |
